

---

Aim: Participants will review the PTW crash and fatality situation in diverse EU countries

Time: 30 minutes - 20 minutes group work, 10 minute group discussion

Method: Small group work and facilitated discussion

Materials: Interactive discussion – PTW data analysis and review

Exercise:

Your facilitator will split participants into pairs for this exercise and provide them with the handout for personal use.

Your task is to analyse which countries have shown the biggest percentage change in casualty rates over the 10 year period. Which have the biggest increases/ decreases?

Are there any conclusions we can draw from this analysis – what additional information would we need to clarify our findings?
