

**Aim:** To get the participants to discuss the data and information needed to assess the road safety situation in regards to powered two wheelers

**Time:** 30 minutes including 20 minutes small group work and 10 minutes group discussion

**Method:** Small group work and facilitated discussion

**Materials:** Interactive discussion – data and information needs for motorized two wheeler safety

**Exercise:**

The facilitator divides the group into small groups of 4 and asks each group to review and discuss the following questions. Each group is to appoint a reporter, who will report back to the larger group.

**Discussion questions**

- What existing policies / laws are in place to encourage powered two-wheeler safety?
- What is the typical age / Gender / Mobility profile for riders of powered two-wheelers?
- What do you think about motorcycle engine size – how powerful is powerful enough?
- How many users wear helmets, protective clothing or use day time running lights?
- What are the common enablers and barriers to motorised two-wheeler use?

Discuss the information you could collect when considering the safety requirements for powered two wheelers, under the following three headings. Consider situations in which that information would be most useful.

An example has been given in each category to start you off.

Policy documents	useful for	Data that can be measured	useful for	Site observations	useful for
Local policy on motorised two wheeler safety	Background info, setting priorities	Casualty stats	Establishing scale of problem, target group	Bus lane provision	Could motorised two wheelers share bus lanes?
